Custom Motor Designs Become Standard

April 12, 2012

Groschopp Inc. is a manufacturer of fractional horsepower motors and gear motors. We pride ourselves in quick delivery and customer assistance with identifying the best custom motor for a particular application. Because Groschopp caters to OEMs, we receive a wide array of unique requests for motors/gearmotors with modifications. Below is a list of items that are considered custom modifications that we currently manufacture for our customers:

- Power Connectors
- Dual Commutators
- Class F Temperature design
- Low Noise
- High/Low Temperature Bearings
- High/Low Temperature Grease
- Cut Gears/Output shafts
- Dual Voltages
- Mounted Powered Fans for Increased Efficiency
- Weatherproofing Anodized Housings/End Bells
- Stainless Steel Shafts
- Custom Powder Coat Paint
- High amp brush cards
- Special Power cords/lead lengths
- Dual Output Reduction
- Double Insulated
- Special Mounts

This list reflects Groschopp's versatility and willingness to work in a team environment with you. Many motor manufacturers would consider the list of items highly customized that would require significant engineering time. At Groschopp we challenged that mentality and developed our '218: Quick Turn-around Department' to allow small quantity modified motors/gear motors to be built and shipped within 48 hours of a purchase order submission. We are large enough to support the international company and small enough to respond to every inquiry. Groschopp is looking for long term relationships, and we expect you are too! Let us help you with your next application.
